Hello, I am *Nyx* – the Guardian of the Lauter River

My Age: very very very old

My job title : Guardian of the Lauter River between France and Germany

My job description: maintaining the balance of the river ecosystem and taking care of its inhabitants

My hobbies: listening to fish gossip
playing tricks on fisherman

So, I really enjoyed my job for the past few thousand years…but somehow it is becoming more stressful…some things just really annoy me…

…it is just **so hot all the time**…it doesn't stop…

….even the **fish** are complaining every day now! Why is no one doing anything about it?

Must I find a solution all by myself again?

Ok, this shouldn’t be so difficult! It would probably just need a little **research** and some **networking** to protect my river…

…wait a minute…there was something I overheard the other day…

…both the French and the German fisherman have been meeting very often recently…

I heard them talking about some project called **RiverDiv**…and a **RiverClub**…

….maybe I can find out what is going on…let’s check out that funny looking human…

He has been measuring the **temperature in my river** a lot during the past year…does he think it is running a fever?

Every kilometer, he placed one of these strange little things into the river…and they were blinking every 15 minutes!

And then he started catching and observing my friends very closely…measuring their sizes and other stuff…

…luckily, he did not eat them, they were all set free again…:)

He had company by a giant insect ...

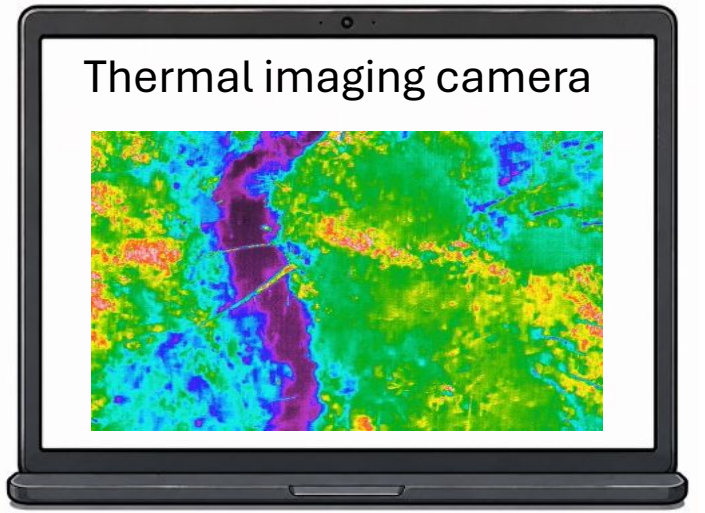

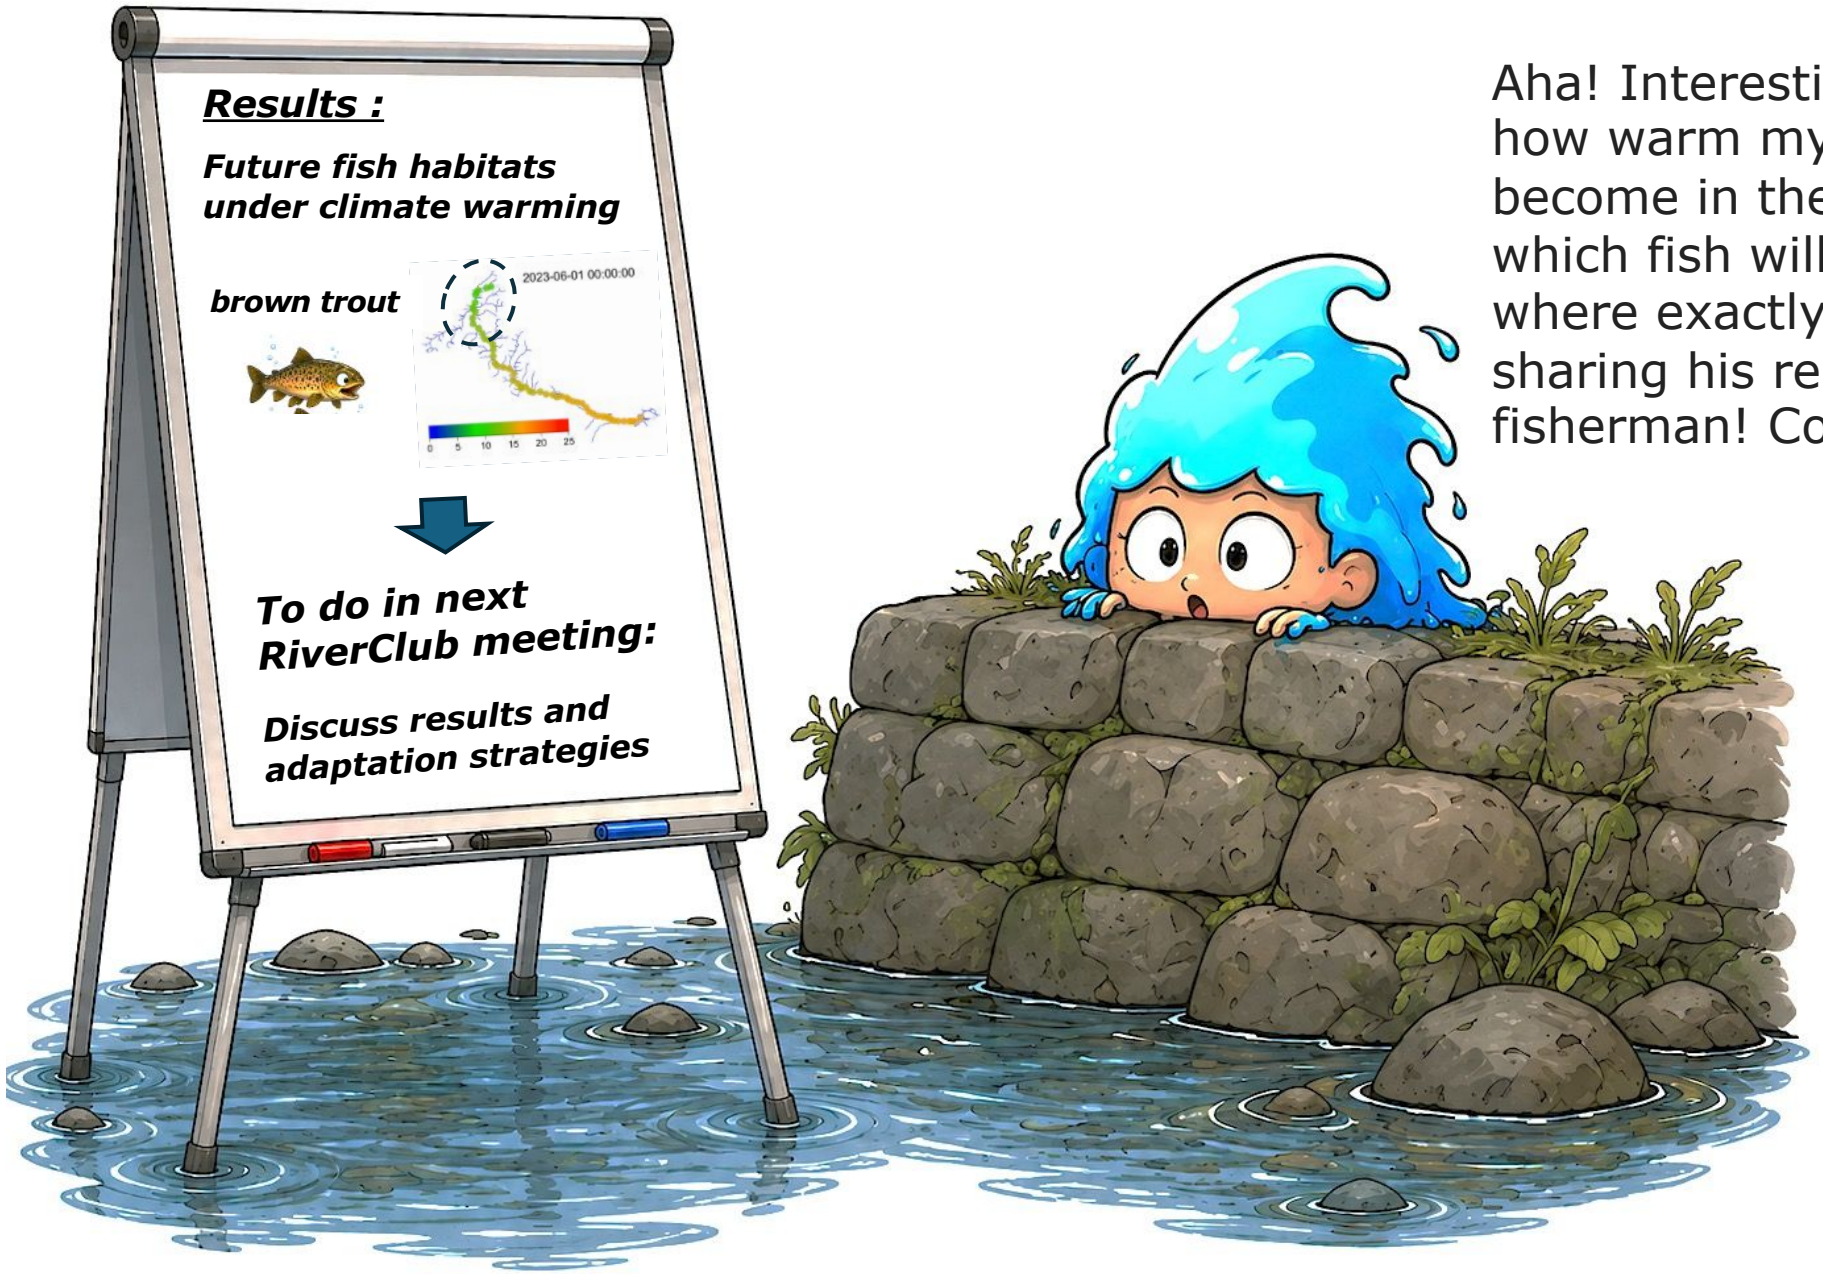

Ok, let me have a closer look at the strange metal mussel he is carrying around…

Oh…is that my river? It seems like he can see the water temperatures everywhere …

What is he just doing with all these things?

Aha! Interesting…he calculated how warm my river could become in the future…and which fish will be able to live where exactly…and he is also sharing his results with the fisherman! Cool!

Who would have thought this! It looks like the humans are finally doing something after all!

Good news my friends! The humans will work together to help protecting our home!

Pack your belongings, it’s moving time!

And if just more people hear about this, we could start protecting even more rivers…

Annual Summit of River Guardians of the Upper Rhine Region
River management adapted to climate change
A guideline for research and networking
developed by humans
Now they are finally acting together across boarders to protect our river ecosystems ! ☺
